16. Abstract (Limit 200 words) This 19th annual report on municipal solid waste disposal and remaining landfill capacity is arranged by Illinois EPA administrative regions. Featured are specification pages describing the chief characteristics of 55 municipal solid waste landfills; their status (active, inactive, closed, under development); locations and hours of operation; tipping fees; quantities of wastes received in 2003, 2004 and 2005; remaining capacities on Jan. 1, 2005, and Jan. 1, 2006; solid waste management fees paid in 2005; names, addresses and phone numbers of landfill owners and operators. Quantities reported by landfills are given in gate cubic yards; as a convenience to the reader, those volumes are divided by 3.3 to provide rough equivalents in tons. The report also includes scaled-down specifications for 104 municipal solid waste transfer stations and 44 compost facilities. During 2005, 51 landfills reported receiving 52.3 million gate cubic yards (more than 15.8 million gate tons) of waste. This volume was almost 1.5 million gate cubic yards less than the total received during 2004, a 2.7 percent decline. As of Jan. 1, 2006, 51 landfills reported remaining capacities totaling 980.4 million gate cubic yards (almost 297.1 million gate tons), or 6.1 million gate cubic yards less than on Jan. 1, 2005, a decline of less than one (0.6) percent. Dividing wastes disposed during 2005 by capacity remaining on Jan. 1, 2006, suggests a landfill life expectancy in Illinois of 19 years, at current (2005) disposal rates, barring capacity adjustments, until capacity is depleted.
